

Noteved Admin Documentation

Noteved Academy

NoteVed Academy helps the students score better in Scholarship exams, such as Navodaya and Adarsh. This offers practicing questions and previous years' papers for CBSE and BSE curriculums besides conducting mock tests and maintaining track of progress. NoteVed Academy provides access to basic resources required for exam preparation.

Technology Used

React:

A JavaScript library for building user interfaces. It provides a component-based architecture and a virtual DOM for efficient rendering and updating of UI elements.

Material UI:

A UI component library that follows the Material Design guidelines. It offers a set of pre-designed and customizable components for creating a visually appealing and consistent user interface.

MongoDB:

A NoSQL database that provides flexibility and scalability for storing and retrieving structured and unstructured data. It uses a document-based model and supports powerful querying capabilities.

Node.js:

A JavaScript runtime built on Chrome's V8 engine. It allows you to run JavaScript code on the server side, enabling server-side scripting and building scalable web applications.

Express:

A minimalistic and flexible web application framework for Node.js. It provides a set of features for building web servers and APIs, including routing, middleware support, and request handling.

Mongoose:

A MongoDB object modeling tool for Node.js. It provides a simple and convenient way to interact with MongoDB and define schemas, models, and queries.

React Router:

A library that enables client-side routing in React applications. It allows for navigation between different pages or views within a single-page application.

Axios:

A popular JavaScript library for making HTTP requests from the browser or Node.js. It provides an easy-to-use API for sending and handling HTTP requests and responses.

Bcrypt:

A library for hashing and salting passwords in Node.js. It helps securely store user passwords by generating and verifying bcrypt hashes.

JWT (JSON Web Tokens):

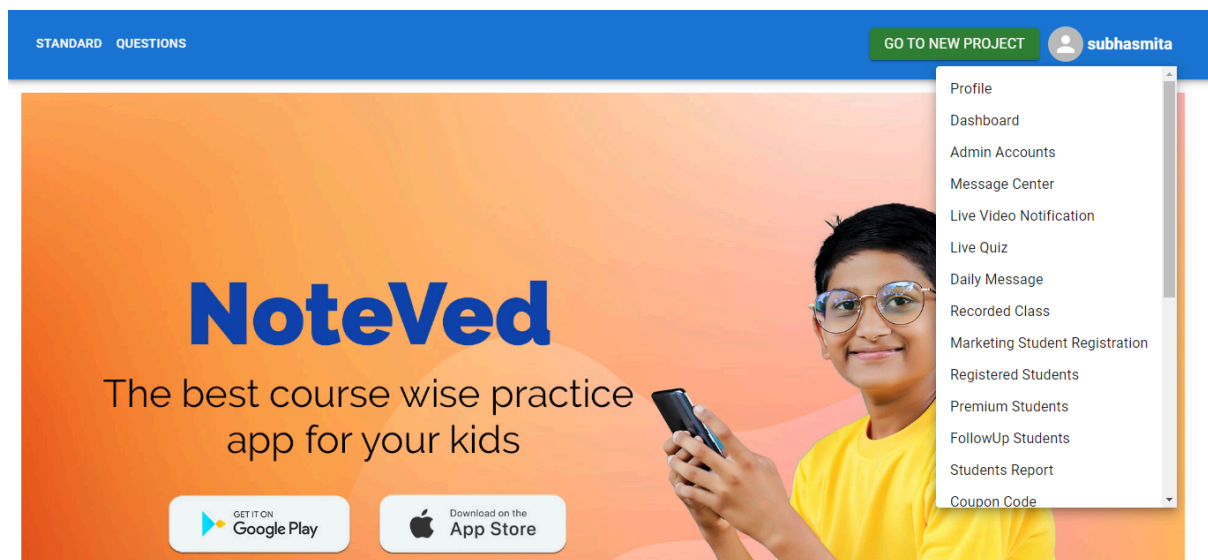

A standard for creating secure authentication tokens. It enables the generation and verification of digitally signed tokens that can be used to authenticate and authorize users in web applications.

Introduction

For proper management of the frontend, an admin site is required. It enables administrators to add questions for mock tests, create and manage live quizzes, as well as view the registered students. The user panel also helps in resolving student queries to ensure smooth operation and supply the necessary tools to manage the platform properly.

1. Dashboard:

The Dashboard page gives the user a detailed view of all the major activities, which include Admin Account Management, Live Quizzes, User Query Resolution, and Profile Management. This also includes access to Registered Students and Teachers, which provides much ease in handling users and others regarding the app's backend so that the app operates effectively and smoothly.

2. Add Questions:

The AddQuestions page allows the admin to create and add questions specific to categories like Question Type, Educational Board, Class, Scholarship, and Subject. This would enable a smooth process wherein the questions would be categorized and relevant to the curricular assessments

under administration.

3. Live class Video Link:

The page Live Video Notifications is where the admin inputs the URLs of the live classes categorized by the Educational Board, Class, and Scholarship type. The entire live session activity gets streamlined and accessed by students as such, during a live class, with minimal hassle in conducting real-time, interactive learning sessions for different groups.

4. Recorded Class:

From this page, admins can upload recorded classes by educational board, class, scholarship, subject, and teacher's name. This allows students access to past lectures that are customized for their curriculum, easily available and convenient for review and studying purposes, at a student's own pace.

5. Live Quiz:

Through the Live Quiz page, users may schedule quizzes on a weekly basis that are targeted at specific boards or scholarships. Users can, through the edit and delete action, update or delete existing quizzes so that the content of any quiz can be flexible; this would help in customizing quizzes based on different academic boards or scholarship requirements.

6. Registered Students and Registered Teachers:

In this, users can view the number of registered students categorized into premium members and free users so that differentiation between users is very clear. There are also registered teachers who can be viewed. New students and teachers can easily be added and managed by

administrators.

7. Solve and see the user query:

It can trace user queries, which enable administrators to have an overview of any problem or issue questioned by users. Every query will be logged and treated in a timely manner. The result is the effective resolution. It boosts user satisfaction through the streamlined system of tracking,

managing, and resolving user queries efficiently.

8. Student Report:

This feature has the capability to produce a report of all the students registered, by scholarship status, academic board, and class level. The feature essentially helps the administrators monitor students' activities and participations in school activities with ease. This is of great assistance in managing student engagement and performance across other segments of education.

9. Premium Students:

In this we can see the total number of premium students, which one can filter either using academic board or premium, using the app and the admin panel. This therefore tends to offer more control as

well as insight into premium student distribution.
