Subscriptions page

Subscription Plans: Show different subscription plans including pricing, and features (such as: monthly and yearly subscription plans) .

Payment Integration: Secure payment gateway in order to allow subscriptions payments to be processed .

Payment gateway integration (Razorpay)

1. First we need to register through Razorpay. After successfully registering we can now access the dashboard of Razorpay where we need to create an API Key ID and Secret Key.

2. After that, in the front end, we Installed the Razorpay SDK package (for react “razorpay” and for react native “react-native-razorpay”). After installing, we need to add the Razorpay code.
3. Now in our backend we need to create an order before processing the payment. This will generate an order ID that needs to be passed to the Razorpay at checkout.
4. After payment is completed on the front end, Razorpay will send a response with razorpay_payment_id, razorpay_order_id, and razorpay_signature using this payment will verify. Now we can test the process. Once testing is successful, Now we need to switch to LIVE API keys.
